Senior (final-year) Information Technology undergraduate at University of Science – VNUHCM, with a solid foundation in Cloud and DevOps. Proven hands-on experience in deploying production-grade infrastructure using Proxmox VE, Kubernetes, and Docker.

Work Experience

Cloud Operation Engineer (Fresher) Jul 2026 – Present
CMC Telecom – Cloud Center *Vietnam*

- Operated core CMC Cloud services (CaaS/Kubernetes, DBaaS PostgreSQL/Redis, ELB, EVS, S3, IAM, Security Groups) and supported customers in deploying, operating, and testing high-availability solutions.

Projects

Interactive Live Commerce Platform on Hybrid Cloud (CMC Cloud + AWS) Oct 2026 – Present
Source: Infra & GitOps repo • Application repo *(click to open)*
Tech Stack: CMC Cloud Kubernetes, DBaaS, Harbor, AWS (IVS, S3, Lambda, Rekognition, Site-to-Site VPN), Palo Alto VM-Series HA, Kong, ArgoCD, Kustomize, Sealed Secrets, Prometheus, Grafana, Loki, k6

- **Data residency & cost:** Kept core microservices and customer/order data on CMC Cloud Kubernetes to meet **in-country data residency**, offloading only live video (Amazon IVS) and AI image moderation (S3, Lambda, Rekognition) to AWS, removing unpredictable AWS compute and data-transfer costs for the core app.
- **No single point of failure at the edge:** Deployed **2** Palo Alto VM-Series firewalls in HA Active/Passive (zone segmentation, floating VIPs) and a **2-tunnel** IPsec Site-to-Site VPN, so moderation webhooks travel privately and traffic survives a firewall or tunnel failure.
- **No more manual deploys or environment drift:** GitHub Actions pushes images to Harbor and bumps Kustomize tags; ArgoCD App-of-Apps auto-syncs dev, prod is promoted by one reviewed tag change; secrets encrypted with Sealed Secrets.
- **Zero oversell in flash sales:** Atomic Redis Lua stock deduction, validated by k6 with **5,000** concurrent orders on **100** units resulting in exactly **100** orders (**0** oversell); HPA (**2**–**20** chat pods) and CMC Cloud node auto-scaling/auto-healing absorb spikes and replace failed nodes.

Cloud-Native Banking Microservices Infrastructure Aug 2026 – Oct 2026

- **Zero downtime under failure and load:** Ran the platform on a **14-node** cluster with an HA multi-zone control plane; Cluster Autoscaler scales **3** → **9** worker nodes and HPA scales pods during surges; observability isolated from banking workloads with Taints & Tolerations.
- **Database load cut by over 80%:** Built an edge pipeline Cloudflare WAF → ELB → HAProxy Ingress → Kong (DB-less) with proxy caching and rate limiting (**100 req/min/IP**), reducing backend database load by **over 80%**.
- **Fast, verified recovery:** Designed DR with Velero and S3-compatible storage (daily snapshots); restore drills achieved **RTO** $<$ **5 min** with near-zero RPO. Stateful data on managed DBaaS and EVS volumes (CSI), images from a private Harbor registry behind a pfSense/OpenVPN perimeter.

Education & Certifications

Bachelor of Information Technology Sep 2023 – Sep 2027
VNUHCM – University of Science *Ho Chi Minh City*
IELTS Academic – 7.0 Overall Band (British Council, ID: 22VN006691CAOL028A) Jun 2022

Skills

- **Containers & Kubernetes:** Docker, Harbor, Deployments, StatefulSets, HPA, Cluster Autoscaler, Taints & Tolerations, Node Affinity, Network Policies, Kustomize.
- **CI/CD & GitOps:** GitHub Actions, ArgoCD (App-of-Apps, automated sync), Sealed Secrets.
- **Ingress & API Gateway:** Kong API Gateway, HAProxy Ingress, Nginx, SSL/TLS.
- **Network Security:** Palo Alto VM-Series HA, pfSense, OpenVPN, IPsec VPN.
- **Cloud Platforms:** CMC Cloud (CaaS, DBaaS, ELB, EVS, Object Storage, VPC, IAM); AWS fundamentals (Solutions Architect – Associate level knowledge).
- **Virtualization:** Proxmox VE / KVM, VMware.
- **Observability & Testing:** Prometheus, Grafana, Loki, k6.
- **Backup & Disaster Recovery:** Velero.
- **Scripting:** Python, Bash.
- **Linux Administration:** Ubuntu Server (systemd, SSH, package management).
